Sand Dunes of the Northern Hemisphere: Distribution, Formation, Migration and Management Lu Qi,Mahesh K. Gaur,Victor R. Squires,2023-12-15 Volume 2 of the book *Sand Dunes of the Northern Hemisphere* is sub titled *Characteristics Dynamics and Provenance of Sand Dunes in the Northern Hemisphere* It brings together a vast body of information and insight into sand dune and desert systems from North Asia Central Asia North Africa and the Middle East Chapters from the Russian Federation include studies on dune systems within the permafrost zone and there is a case study

from temperate zone dune system in coastal Japan Volume 2 Characteristics Dynamics and Provenance of Sand Dunes in the Northern Hemisphere of 16 chapters in three Parts focusses on Saharan Africa Egypt and Middle East and gives attention to sand mobility and encroachment with case studies from a number of countries where these matters are of concern We also include chapters on the remote dunes in the permafrost zone and in the hyper arid deserts of Iran Case studies are used to highlight the characteristics of dunes and their interaction with humans in several widely divergent settings Volume 2 concludes with some musing on the value of study of the past as key to the future and speculates on what the future might hold in the light of a warmer and drier Earth and a rise in sea level that threaten large tracts of low lying land with marine incursions and destruction from storm surge PART 4 Sand Mobility and Encroachment The seven chapters in this Part examine the real world impact of sand encroachment and dune migration on people and their economic activities and the health welfare and financial implications related to destruction of infrastructure including human habitations PART 5 Sand Dune Landscapes Distribution Formation and Management Seven Case studies from several geographic regions in Africa the Middle East north east Asia are presented here to demonstrate the underlying mechanisms in dune formation and the diverse approaches to their management Human impacts such as sand mining tourism development combine with natural forces like climate variability to challenge the realization of an optimum management strategy PART 6 Concluding Thoughts Coping with an Unknown Future from a Little known Past The two chapters in Part 6 have special roles We are privileged to publish new research findings that are summarized here in Chapter 38 from extensive and detailed work conducted in the Kyzyl Kum and Karakum sand seas of Central Asia There is a strong belief that further study of the little known past such as revealed in this study could unlock clues as to what a future Earth might look like This leads on to speculation in Chapter 39 about the implications of what we already know about global change not only climate change and the impact of the Anthropocene on the dune systems both inland and coastal Sea level rise marine incursions and an increase in extreme weather events will affect dune systems and sand seas on the Northern Hemisphere and beyond

Sand Dunes of the Northern Hemisphere Qi Lu, Mahesh K. Gaur, Victor R. Squires, 2023-03-10

This book in two volumes and with a foreword by the renowned Professor M A J Williams draws on evidence from coastal and inland regions including desert dunes wind blown dust river and lake sediments glacial moraines plant and animal fossils isotope geochemistry soils and prehistoric archaeology to better understand the genesis and development of dunes systems in selected northern hemisphere sand dunes from Asia Africa and the Middle East regions The collection of research papers and case studies that are presented in this book provide the reader with a wealth of information about the distribution and types of sand dunes and an insight into the complexity of sand dune formation migration and management Research in many countries across the northern hemisphere shows that dunes whether coastal or inland are under pressure around the world Much of the pressure comes from human activities and the anthropogenic disturbance when coupled with global warming

and alterations to the amount frequency and temporal distribution of precipitation could lead to more serious management challenges in the future There is much that we still need to find out about the origin genesis and development of sand dunes so that they can be managed better The difficult and complex questions being repeatedly raised can be answered only by interdisciplinary endeavours Geomorphologists geologists palaeontologists climatologists ecologists and others can work together on research projects that better define the origin evolution and development of dunes both inland and along the coasts Many chapters in this book attempt to reconstruct past climatic changes in deserts and their margins at a variety of scales in space and time in the expectation that such information might assist in preparing us for future global warming and drying

Desert Aeolian Processes V.P. Tchakerian, 2012-12-06 The idea for this volume came during the dryland sessions of the Association of American Geographers meeting in San Diego in April 1992 The large number of papers devoted to aeolian processes and landforms indicated to me that aeolian geomorphology had come of age and the last 15 years or so had produced a plethora of papers books and edited volumes on all aspects of aeolian geomorphology Chapter one is my tentative attempt to place developments in aeolian geomorphology in a historical perspective and to contemplate some thoughts about the future The fourteen papers selected address a wide range of issues ranging from micro scale studies devoted to aeolian dust sediment transport and rock varnish in ventifacts to medium scale studies of dunes and dune forms reverse desertification and macro scale studies of ergs and sand transport pathways The American Southwest particularly the spectacular and unique Mojave Desert of California is featured prominently in seven chapters I hope this volume provides students and colleagues some new perspectives in aeolian geomorphology as well as pathways for future work

Aeolian Geomorphology Ian Livingstone, Andrew Warren, 2019-02-28 A revised introduction to aeolian geomorphology written by noted experts in the field The new revised and updated edition of Aeolian Geomorphology offers a concise and highly accessible introduction to the subject The text covers the topics of deserts and coastlines as well as periglacial and planetary landforms The authors review the range of aeolian characteristics that include soil erosion and its consequences continental scale dust storms sand dunes and loess Aeolian Geomorphology explores the importance of aeolian processes in the past and the application of knowledge about aeolian geomorphology in environmental management The new edition includes contributions from eighteen experts from four continents All the chapters demonstrate huge advances in observation measurement and mathematical modelling For example the chapter on sand seas shows the impact of greatly enhanced and accessible remote sensing and the chapter on active dunes clearly demonstrates the impact of improvements in field techniques Other examples reveal the power of greatly improved laboratory techniques This important text Offers a comprehensive review of aeolian geomorphology Contains contributions from an international panel of eighteen experts in the field Includes the results of the most recent research on the topic Filled with illustrative examples that demonstrate the advances in laboratory approaches Written for students and professionals in the field Aeolian Geomorphology provides a

comprehensive introduction to the topic in twelve new chapters with contributions from noted experts in the field **Sand Dunes of the Northern Hemisphere: Distribution, Formation, Migration and Management** Lu Qi, Mahesh K.
