Advanced Polymer Nanoparticles Synthesis And Surface Modifications:

Advanced Polymer Nanoparticles Vikas Mittal, 2010-07-13 Polymer nanoparticles are an important class of polymeric materials that are required for a number of commercial applications. This book presents the tremendous developments in the synthesis and surface modification techniques to generate advanced polymer nanoparticles. After a brief introduction to polymer latex technology, the text discusses emulsion polymerization, miniemulsion polymerization, as well as batch, semi-batch, and continuous polymerization. It then details the synthesis and surface modification of various types of polymer nanoparticles, including polymers with core-shell morphologies, dendrimers, modified polymer nanoparticles, and porous and hollow polymer nanoparticles.

Advanced Polymer Nanoparticles Vikas Mittal, 2010-07-13 Polymer latex particles continue to become increasingly important in numerous commercial applications. Advanced synthesis techniques are the key to developing new functionality for nanoparticles. These methods make it possible to tailor the size, chemical composition, or properties of these particles, as well as the molecular weight of the polymer.

Polymer Adhesion, Friction, and Lubrication Hongbo Zeng, 2013-02-07 Specifically dedicated to polymer and biopolymer systems, *Polymer Adhesion, Friction, and Lubrication* guides readers to the scratch wear and lubrication properties of polymers and the engineering applications from biomedical research to automotive engineering. Author Hongbo Zeng details different experimental and theoretical methods used to probe static and dynamic properties of polymer materials and biomacromolecular systems. Topics include the use of atomic force microscopy (AFM) to analyze nanotribology, polymer thin films and brushes, nanoparticles, rubber, and tire technology, synovial joint lubrication, adhesion in paper products, bioMEMS, and electrorheological fluids.

Advances in Organic Coatings 2018 Flavio Deflorian, 2020-12-10 The recent huge developments in nanotechnology and surface science are allowing the production of multifunctional coatings: materials combining different properties (corrosion protective actions, aesthetic functions, hydrophobic properties, self-healing abilities, etc.). Moreover, the increasing attention to environmental issues is driving the development of new systems joining advanced performance with high sustainability, which can be better understood using new highly efficient experimental techniques. This frame is inducing us to consider the advances in organic coatings: the skin of materials as one of the most interesting and promising innovation fields in material science and technology, with important consequences not only considering fundamental aspects in science but also for industrial applications positively affecting everyday life. The aim of this Special Issue is to provide an update of the most advanced research in this area, showing the innovation trends and promoting further research for better properties of new coating materials.
