Novel Bioremediation Processes for Treatment of Seleniferous Soils and Sediment Shrutika Wadgaonkar, 2018-10-26 The aim of this Ph D was to develop a technology for the remediation of seleniferous soils sediments and to explore microbial reduction of selenium oxyanions under different respiration conditions and bioreactor configurations Seleniferous soil collected from the wheat grown agricultural land in Punjab India was characterized and its soil washing was optimized by varying parameters where addition of oxidizing agents

showed a maximum selenium removal efficiency Aquatic plants *Lemna minor* and *Egeria densa* were used to study phytoremediation of the selenium rich soil leachate containing oxidizing agents Additionally migration of the soluble selenium fraction from the upper to the lower layers and its subsequent reduction and accumulation in the lower layers of the soil column was observed during soil flushing Furthermore the soil leachate containing selenium oxyanions obtained from soil washing was treated in a UASB reactor by varying the organic feed Ex situ bioremediation of selenium oxyanions was studied under variable conditions An aerobic bacterium *Delftia lacustris* capable of transforming selenate and selenite to elemental selenium was isolated and characterized Anaerobic bioreduction of selenate coupled to methane oxidation was investigated in serum bottles and a biotrickling filter using marine sediment as inoculum Finally the effect of contamination of other chalcogen oxyanions tellurium on selenium bioreduction was studied in a continuous system UASB reactor

Come On! Ernst Ulrich von Weizsäcker, Anders Wijkman, 2017-11-12 Current worldwide trends are not sustainable The Club of Rome's warnings published in the book *Limits to Growth* are still valid Remedies that are acceptable for the great majority tend to make things worse We seem to be in a philosophical crisis Pope Francis says it clearly our common home is in deadly danger Analyzing the philosophical crisis the book comes to the conclusion that the world may need a new enlightenment one that is not based solely on doctrine but instead addresses a balance between humans and nature as well as a balance between markets and the state and the short versus long term To do this we need to leave behind working in silos in favor of a more systemic approach that will require us to rethink the organization of science and education However we have to act now the world cannot wait until 7.6 billion people have struggled to reach a new enlightenment This book is full of optimistic case studies and policy proposals that will lead us back to a trajectory of sustainability But it is also necessary to address the taboo topic of population increase Countries with a stable population fare immensely better than those with continued increase Finally we are presenting an optimistic book from the Club of Rome

Agroecosystem Diversity Gilles Lemaire, Paulo Cesar de Faccio Carvalho, Scott Kronberg, Sylvie Recous, 2018-10-08 *Agro Ecosystem Diversity Impact on Food Security and Environmental Quality* presents cutting edge exploration of developing novel farming systems and introduces landscape ecology to agronomy It encompasses the broad range of links between agricultural development and ecological impact and how to limit the potential negative results Presented in seven sections each focusing on a specific challenge to sustaining diversity the book provides insights toward the argument that by re-introducing diversity it should be possible to maintain a high level of productivity of agro ecosystems while also maintaining and or restoring a satisfactory level of environment quality and biodiversity Demonstrates that diversified agro ecosystems can be intensified with environmental quality preserved restored and enhanced Includes analysis of economic constraints leading to specialization of farms and regions and the social locking forces resisting to diversification of agro ecosystems Presents a global vision of world agriculture and the tradeoff between a necessary increase in food production and restoring environment quality
