Advances In Computing Science Asian99:

Advances in Computing Science - ASIAN'99 P.S. Thiagarajan, Roland Yap, 2003-07-31 This book constitutes the refereed proceedings of the 5th Asian Computing Science Conference ASIAN 99 held in Phuket Thailand in December 1999 The 28 revised full papers presented together with two invited contributions and 11 short presentations were carefully reviewed and selected from a total of 114 submissions Among the topics addressed are programming theory formal methods automated reasoning verification embedded systems real time systems distributed systems and mobile computing

Mechanizing Hypothesis Formation Jan Rauch, Milan Šimůnek, David Chudán, Petr Máša, 2022-10-20 Mechanizing hypothesis formation is an approach to exploratory data analysis Its development started in the 1960s inspired by the question can computers formulate and verify scientific hypotheses The development resulted in a general theory of logic of discovery It comprises theoretical calculi dealing with theoretical statements as well as observational calculi dealing with observational statements concerning finite results of observation Both calculi are related through statistical hypotheses tests A GUHA method is a tool of the logic of discovery It uses a one to one relation between theoretical and observational statements to get all interesting theoretical statements A GUHA procedure generates all interesting observational statements and verifies them in a given observational data Output of the procedure consists of all observational statements true in the given data Several GUHA procedures dealing with association rules couples of association rules action rules histograms couples of histograms and patterns based on general contingency tables are involved in the LISp Miner system developed at the Prague University of Economics and Business Various results about observational calculi were achieved and applied together with the LISp Miner system The book covers a brief overview of logic of discovery Many examples of applications of the GUHA procedures to solve real problems relevant to data mining and business intelligence are presented An overview of recent research results relevant to dealing with domain knowledge in data mining and its automation is provided Firsthand experiences with implementation of the GUHA method in the Python language are presented

Formal Methods for Distributed System Development Tommaso Bolognesi, Diego Latella, 2013-03-20 th The 20 anniversary of the IFIP WG6 1 Joint International Conference on Fonna Methods for Distributed Systems and Communication Protocols FORTE XIII PSTV XX was celebrated by the year 2000 edition of the Conference which was held for the first time in Italy at Pisa October 10 13 2000 In devising the subtitle for this special edition Fonna Methods Implementation Under Test we wanted to convey two main concepts that in our opinion are reflected in the contents of this book First the early pioneering phases in the development of Formal Methods FM s with their conflicts between evangelistic and agnostic attitudes with their over optimistic applications to toy examples and over skeptical views about scalability to industrial cases with their misconceptions and myths all this is essentially over Many FM s have successfully reached their maturity having been implemented into concrete development practice a number of papers in this book report about successful experiences in specifying and verifying real distributed systems and protocols

Second one of the several myths about FM is the fact that their adoption would eventually eliminate the need for testing is still quite far from becoming a reality and again this book indicates that testing theory and applications are still remarkably healthy. A total of 63 papers have been submitted to FORTEIPSTV 2000 out of which the Programme Committee has selected 22 for presentation at the Conference and inclusion in the Proceedings.

CONCUR 2002 - Concurrency Theory Lubos Brim, Petr Jancar, Mojmir Kretinsky, Antonin Kucera, 2003-08-02 This book constitutes the refereed proceedings of the 13th International Conference on Concurrency Theory CONCUR 2002 held in Brno Czech Republic in August 2002. The 32 revised full papers presented together with abstracts of seven invited contributions were carefully reviewed and selected from 101 submissions. The papers are organized in topical sections on verification and model checking logic mobility probabilistic systems models of computation and process algebra security Petri nets and bisimulation.

Formal Methods in Computer-Aided Design Mark D. Aagaard, John W. O'Leary, 2003-06-30 This volume contains the proceedings of the Fourth Biennial Conference on Formal Methods in Computer Aided Design FMCAD. The conference is devoted to the use of mathematical methods for the analysis of digital hardware circuits and systems. The work reported in this book describes the use of formal mathematics and associated tools to design and verify digital hardware systems. Functional verification has become one of the principal costs in a modern computer design effort. FMCAD provides a venue for academic and industrial researchers and practitioners to share their ideas and experiences of using discrete mathematical modeling and verification. Over the past 20 years this area has grown from just a few academic researchers to a vibrant worldwide community of people from both academia and industry. This volume includes 23 papers selected from the 47 submitted papers each of which was reviewed by at least three program committee members. The history of FMCAD dates back to 1984 when the earliest meetings on this topic occurred as part of IFIP WG10.2.

Static Analysis Manuel Hermenegildo, German Puebla, 2003-08-02 This book constitutes the refereed proceedings of the 9th International Static Analysis Symposium SAS 2002 held in Madrid Spain in September 2002. The 32 revised full papers presented were carefully reviewed and selected from 86 submissions. The papers are organized in topical sections on theory data structure analysis type inference analysis of numerical problems implementation data flow analysis compiler optimizations security analyses abstract model checking semantics and abstract verification and termination analysis.

Business Applications and Computational Intelligence Kevin E. Voges, Nigel Pope, 2006-01-01 This book deals with the computational intelligence field particularly business applications adopting computational intelligence techniques. Provided by publisher.
