Bonobo Cognition Behaviour Brian Hare:

Bonobo Cognition and Behaviour Brian Hare, Shinya Yamamoto, 2015-11-30 This volume includes twelve novel empirical papers focusing on the behaviour and cognition of both captive and wild bonobos *Pan paniscus*. Overall it demonstrates how anyone interested in understanding humans or chimpanzees must also know bonobos. **Bonobos** Hare & Yamamoto, 2016 Bonobos Brian Hare, Shinya Yamamoto, 2017-10-20 The bonobo along with the chimpanzee is one of our two closest living relatives. Their relatively narrow geographic range south of the Congo River in the Democratic Republic of Congo combined with the history of political instability in the region has made their scientific study extremely difficult. In contrast there are dozens of wild and captive sites where research has been conducted for decades with chimpanzees. Because data sets on bonobos have been so hard to obtain and so few large scale studies have been published the majority of researchers have treated chimpanzee data as being representative of both species. However this misconception is now rapidly changing. With relative stability in the DRC for over a decade and a growing community of bonobos living in zoos and sanctuaries internationally there has been an explosion of scientific interest in the bonobo with dozens of high impact publications focusing on this fascinating species. This research has revealed exactly how unique bonobos are in their brains and behavior and reminds us why it is so important that we redouble our efforts to protect the few remaining wild populations of this iconic and highly endangered great ape species. **The Genius of Dogs** Brian Hare, Vanessa Woods, 2013-02-05 The perfect gift for dog lovers and readers of *Inside of a Dog* by Alexandra Horowitz this New York Times bestseller offers mesmerizing insights into the thoughts and lives of our smartest and most beloved pets. Does your dog feel guilt? Is she pretending she can't hear you? Does she want affection or just your sandwich? In their New York Times bestselling book *The Genius of Dogs* husband and wife team Brian Hare and Vanessa Woods lay out landmark discoveries from the Duke Canine Cognition Center and other research facilities around the world to reveal how your dog thinks and how we humans can have even deeper relationships with our best four legged friends. Breakthroughs in cognitive science have proven dogs have a kind of genius for getting along with people that is unique in the animal kingdom. This dog genius revolution is transforming how we live and work with dogs of all breeds and what it means for you in your daily life with your canine friend. Hidden Depths Penny Spikins, 2022-08-23 In *Hidden Depths* Professor Penny Spikins explores how our emotional connections have shaped human ancestry. Focusing on three key transitions in human origins Professor Spikins explains how the emotional capacities of our early ancestors evolved in response to ecological changes much like similar changes in other social mammals. For each transition dedicated chapters examine evolutionary pressures, responses in changes in human emotional capacities and the archaeological evidence for human social behaviours. Starting from our earliest origins in Part One Professor Spikins explores how after two million years ago movement of human ancestors into a new ecological niche drove new types of collaboration including care for vulnerable members of the group. Emotional adaptations lead to cognitive

changes as new connections based on compassion generosity trust and inclusion also changed our relationship to material things Part Two explores a later key transition in human emotional capacities occurring after 300 000 years ago At this time changes in social tolerance allowed ancestors of our own species to further reach out beyond their local group and care about distant allies making human communities resilient to environmental changes An increasingly close relationship to animals and even to cherished possessions appeared at this time and can be explained through new human vulnerabilities and ways of seeking comfort and belonging Lastly Part Three focuses on the contrasts in emotional dispositions arising between ourselves and our close cousins the Neanderthals Neanderthals are revealed as equally caring yet emotionally different humans who might if things had been different have been in our place today This new narrative breaks away from traditional views of human evolution as exceptional or as a linear progression towards a more perfect form Instead our evolutionary history is situated within similar processes occurring in other mammals and explained as one in which emotions rather than intellect were key to our evolutionary journey Moreover changes in emotional capacities and dispositions are seen as part of differing pathways each bringing strengths weaknesses and compromises These hidden depths provide an explanation for many of the emotional sensitivities and vulnerabilities which continue to influence our world today

The Goodness Paradox Richard Wrangham,2019-12-03 A fascinating new analysis of human violence filled with fresh ideas and gripping evidence from our primate cousins historical forebears and contemporary neighbors Steven Pinker author of The Better Angels of Our Nature We Homo sapiens can be the nicest of species and also the nastiest What occurred during human evolution to account for this paradox What are the two kinds of aggression that primates are prone to and why did each evolve separately How does the intensity of violence among humans compare with the aggressive behavior of other primates How did humans domesticate themselves And how were the acquisition of language and the practice of capital punishment determining factors in the rise of culture and civilization Authoritative provocative and engaging The Goodness Paradox offers a startlingly original theory of how in the last 250 million years humankind became an increasingly peaceful species in daily interactions even as its capacity for coolly planned and devastating violence remains undiminished In tracing the evolutionary histories of reactive and proactive aggression biological anthropologist Richard Wrangham forcefully and persuasively argues for the necessity of social tolerance and the control of savage divisiveness still haunting us today

A Most Interesting Problem Jeremy DeSilva,2022-11-29 Leading scholars take stock of Darwin s ideas about human evolution in the light of modern science In 1871 Charles Darwin published The Descent of Man a companion to Origin of Species in which he attempted to explain human evolution a topic he called the highest and most interesting problem for the naturalist A Most Interesting Problem brings together twelve world class scholars and science communicators to investigate what Darwin got right and what he got wrong about the origin history and biological variation of humans Edited by Jeremy DeSilva and with an introduction by acclaimed Darwin biographer Janet Browne A Most Interesting Problem draws on the latest discoveries in

fields such as genetics paleontology bioarchaeology anthropology and primatology This compelling and accessible book tackles the very subjects Darwin explores in *Descent* including the evidence for human evolution our place in the family tree the origins of civilization human races and sex differences *A Most Interesting Problem* is a testament to how scientific ideas are tested and how evidence helps to structure our narratives about human origins showing how some of Darwin's ideas have withstood more than a century of scrutiny while others have not *A Most Interesting Problem* features contributions by Janet Browne Jeremy DeSilva Holly Dunsworth Agustín Fuentes Ann Gibbons Yohannes Haile Selassie Brian Hare John Hawks Suzana Herculano Houzel Kristina Killgrove Alice Roberts and Michael J. From Extraterrestrials to Animal Minds Simon Conway Morris, 2022-03-28 In this learned romp of science writing Cambridge professor Simon Conway Morris cheerfully challenges six assumptions what he calls myths that too often pass as unquestioned truths amongst the evolutionary orthodox His convivial tour begins with the idea that evolution is boundless in the kinds of biological systems it can produce Not true he says The process is highly circumscribed and delimited Nor is it random This popular notion holds that evolution proceeds blindly with no endgame But Conway Morris suggests otherwise pointing to evidence that the processes of evolution are seeded with inevitabilities If that is so then what about mass extinctions Don't they steer the development of life in radically new directions Rather the reverse claims Conway Morris Such cataclysms accelerate evolutionary developments that were going to happen anyway And what about that other evolutionary canard the missing link There is plenty to choose from in the fossil record but persistently overlooked is that in any group there is not one but a phalanx of missing links Once again we under score the near inevitability of evolutionary outcomes Turning from fossils to minds Conway Morris critically examines the popular tenet that the intelligence of humans and animals are the same thing a difference of degree not kind A closer scrutiny of our minds shows that in reality an unbridgeable gulf separates us from even the chimpanzees so begging questions of consciousness and Mind Finally Conway Morris tackles the question of extraterrestrials Undoubtedly the size and scale of the universe suggest that alien life must exist somewhere beyond Earth and our tiny siloed solar system After all evolutionary convergence more than hints that human like forms are universal But Dr Conway Morris has serious doubts The famous Fermi Paradox Where are they appears to hold Alone in the cosmos and unique but not quite in the way one might expect

an other Sharon Patricia Holland, 2023-07-03 In *an other* Sharon Patricia Holland offers a new theorization of the human animal divide by shifting focus from distinction toward relation in ways that acknowledge that humans are also animals Holland centers ethical commitments over ontological concerns to spotlight those moments when Black people ethically relate with animals Drawing on writers and thinkers ranging from Hortense Spillers Sara Ahmed Toni Morrison and C. E. Morgan to Jane Bennett Jacques Derrida and Donna Haraway Holland decenters the human in Black feminist thought to interrogate blackness insurgence flesh and femaleness She examines MOVE's incarnation as an animal liberation group uses sovereignty in Morrison's *A Mercy* to understand blackness

indigeneity and the animal analyzes Charles Burnett's films as commentaries on the place of animals in Black life and shows how equestrian novels address Black and animal life in ways that rehearse the practices of the slavocracy. By focusing on doing rather than being Holland demonstrates that Black life is not solely likened to animal life; it is relational and world-forming with animal lives.

Amanka Stories Lou Grossfeldt, David Blissett, 2021-09-01

Amanka is a word from one of the languages used by people living in the rural north west of Uganda. It's a beautiful rich word that means family. Yet in the forests and villages of this part of Uganda and across much of tropical Africa and Asia, families are at war. In the narrowing margins between forest and farm, human and non-human, there is a growing conflict. A deadly conflict. The *Amanka Book Project* has been coordinated by writer David Blissett and primate curator Lou Grossfeldt. They celebrate our closest living relatives by sharing the stories and experiences of the people who are working, fighting, and sometimes risking their lives to save them. The focus is on all ape species: gorilla, orangutan, chimpanzee, bonobo, and the gibbon family. These are stories of sacrifice and courage, and hope, tears, and happiness, love and loss. In each chapter, Lou and David speak with people who devote their lives to the conservation and wellbeing of the apes. This includes scientists, researchers, caregivers, vets, filmmakers, and conservation advocates. Many of the stories in this book have never been told before and will give readers a direct insight into the day-to-day heartaches, challenges, and joys of working with these intelligent, sentient beings. We wrote this book to raise awareness of the plight of our ape family and to share the stories of the unsung heroes who are trying to help them. All contributors have donated to this project, and profits from book sales will be donated to various ape conservation and enrichment programs or projects. Lou Grossfeldt and David Blissett
